- Google Data Studio
- User-Centric Reporting
- Requirements Gathering

WORK EXPERIENCE

Power BI Data Analyst

Bloomberg LP

📅 2025 - current 📍 New York, NY

- Developed interactive Power BI dashboards for stakeholders, enabling real-time tracking of key performance indicators for faster decision-making across reporting environments.
- Guided cross-functional teams on designing dashboard structures and defining metric logic, resulting in a 24% increase in dashboard utilization by planning teams.
- Refined reporting outputs for recurring business reviews, **saving analysts 7.4 hours** per month while improving clarity for decision-makers.

Data Analyst – Data Operations

S&P Global

📅 February 2023 - December 2024 📍 New York, NY

- Queried content and operations datasets in SQL Server Management Studio (SSMS), improving exception identification accuracy by 13% before downstream publication.
- Automated data movement checks through Microsoft SSIS, **shortening validation turnaround by 8 days** for internal reporting workflows.
- Validated record-level inconsistencies across structured data feeds, preventing 184 misclassified entries from reaching business users.
- Coordinated with operations and data teams to tighten handoff logic, strengthening trust in the datasets used across market intelligence functions.

Market Intelligence Analyst I

Estee Lauder

📅 September 2022 - January 2023 📍 New York, NY

- Analyzed campaign and channel performance in Google Data Studio, informing regional marketing teams of consumer trends to refine pre-launch strategies.
- Compiled sell-through, customer, and category trends into concise reports for senior management, enhancing merchandise planning discussions with clear data insights.
- Partnered with marketing and retail stakeholders to align reporting definitions, **reducing confusion around performance calls** and improving decision consistency.
- Translated fragmented market signals into clear business insights, helping teams react earlier to underperforming product segments.
