EDUCATION

B.S.

Data Science

University of Michigan

📅 August 2023 - current

📍 Ann Arbor, MI

SKILLS

- MySQL
- SAS
- Python
- Amazon Web Services (AWS)
- Task prioritization
- Responsiveness to feedback

HOBBIES

- Open-source contributions
- Dashboard development
- Information design

CAREER OBJECTIVE

Aspiring data analyst with experience in analytics, reporting, and data preparation using MySQL, SAS, and Python, pursuing a data analyst internship at Thomson Reuters. Equipped to support insight generation, data quality, and business reporting while contributing to a trusted, information-driven organization focused on accuracy, speed, and impact.

WORK EXPERIENCE

Waiter

Zingerman's Deli

📅 January 2026 - current 📍 Ann Arbor, MI

- Delivered high-volume lunch service with accurate order handoff and managed 8 tables simultaneously during weekend lunch rushes.
- Assisted guests with menu selections, including deli favorites, specials, and dietary needs, to **ensure accurate orders** and customer satisfaction.
- Juggled dine-in orders, processed transactions, and completed side tasks efficiently across 3 stations during high-traffic weekend rushes.

PROJECTS

TravelTrack

Travel Data Analyst

📅 March 2025 - June 2025

- Queried trip, booking, and user-behavior data in MySQL to uncover route and seasonality patterns for the team's travel dashboard.
- Modeled traveler segments in SAS, separating high-intent users from casual browsers and sharpening campaign recommendations.
- Visualized destination demand in Python, turning raw search trends into a presentation the class could follow in 8 minutes.
- Sequenced research, cleaning, and reporting work across the project timeline so **milestone handoffs stayed on track**.

Recomendify

Project Manager

📅 January 2024 - May 2024

- Directed a 10-person team from planning through release, keeping engineering, testing, and presentation work aligned around the Recomendify engine launch.
- Deployed the recommendation engine on Amazon Web Services (AWS), giving the group a stable environment for demos and validation.
- Refined feature scope after peer and instructor review, which **lifted final recommendation relevance scores by 7.4%**.
